Who We Are

Sivuniq provides integrated and stand-alone environmental and construction support services on private and public projects. Our scientists and engineers focus on project assessment, site restoration, regulatory compliance and environmental management, remedial design and action, construction management and engineering support services.

Construction Administration/ Management

Sivuniq works with clients to act as the owner's representative for coordination of design/build and construction projects. We also provide contract administration services to construction firms involved in federal government contracting.

Sivuniq understands the relationship between the absolute success of a project and the proficient implementation of a project plan. We focus on:

- Completing projects on time and within budget
- Minimizing construction impacts
- Quality of work

Sivuniq maintains a staff of educated, disciplined and highly-trained construction administrators, managers, inspectors and support staff who provide comprehensive services essential for today's increasingly progressive schedules and complex construction projects.

- Preconstruction Services
- Construction Phase
- Post Construction Phase

Program Integration

Sivuniq's capabilities in organization analysis, requirement identification, scheduling and management systems provide tools to support resourcing and improve business enterprise architecture.

Engineering Support Services

Sivuniq leverages the diverse experiences and capabilities of our staff, specializing in studies, evaluations, and consulting services to provide sustainable and successful facility operations.

Environmental Services

Contaminated Sites

Sivuniq has extensive experience in identification and assessment for contaminated site characterization. Our team of engineers and scientists provide sound and cost-effective solutions for engineered remediation, intrinsic remediation support or risk-based closure. We conduct studies to adequately characterize the site and then proceed with a solution.

Permitting

Sivuniq biologists, scientists, regulatory specialists and engineers are qualified to support federal, state and local environmental project permitting requirements. Our professional staff is experienced in areas of environmental law, policy development, ecology and risk assessment.

COMPLIANCE

Sivuniq has extensive experience assisting clients in designing and implementing a myriad of compliance programs. From environmental regulations to monitoring, reporting and documentation, we provide support for local, state and federal agencies.

CLIENT FOCUS

Our staff has completed projects for a variety of clients, including:

- Bureau of Indian Affairs
- Bureau of Land Management
- General Services Administration
- National Guard Bureau
- U.S. Air Force Center for Environmental Excellence
- U.S. Army Environmental Command
- U.S. Army Headquarters
- U.S. Army Installation Management Command
